

We Have An Offer You Can't Refuse.

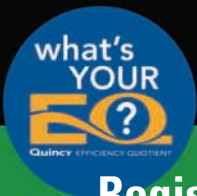

Going "green" is not about jumping on the bandwagon. It's a smart way to stay globally competitive by slashing costs — and protecting the planet. Quite simply, green is good for your company's financial health. Generating compressed air accounts for 10% of the total industrial energy used in the U.S. — and that energy use impacts your bottom line. Through the patent-pending Efficiency Quotient (EQ™) Analysis, Quincy Compressor can optimize your compressed air system to reduce energy use and costs. So you'll save some green while going green.

Register to win a free EQ Analysis for your plant at HowGreenIsYourPlant.com. Truly an offer you can't refuse.
